Helping People Understand Soils

Subaqueous

2010 RI Completes 1st CZSS

Main purpose of Soil Survey is to provide interpretations, suitability, limitations, ecologic information, and chemical/physical property of the soils!

Oyster Reef Restoration Potential by Soil type

Map Legend
RI Coastal Zone Soil Survey
Oyster Restoration Potential

- Fair - high energy
- Fair - sedimentation
- Fair - sedimentation, SAV
- Fair - shallow fluid bottom, sulfides
- Fair - water depth
- Good - bottom structure
- Good - boulder substrate
- Good - sandy substrate
- Poor - fluid bottom, depth, sulfides
- Poor - fluid bottom, sulfides
- Poor - intertidal
- Poor - navigation channels

Ecosystem benefits provided by Oysters

Improved Water Quality

Water Quality/Processors

Scale (not to scale)

Sources: Esri, DigitalGlobe, GeoEye, I-cubed, USDA, USGS, AEX, Geomapping, AeroGRID, IGN, IGP, swisstopo, and the GIS User Community

Oi--0 to 5 centimeters ; loose; abrupt wavy boundary. Lab sample # 93P04863

Oe--5 to 10 centimeters; very dark gray (5YR 3/1) broken face and dark reddish brown (5YR 3/2) rubbed partially decomposed organic matter; very friable; common fine to coarse roots throughout and many very fine roots throughout; abrupt wavy boundary. Lab sample # 93P04864

Oa--10 to 18 centimeters; dusky red (2.5YR 3/2) broken face and very dark gray (N 3/0) rubbed ; very friable; common fine to coarse roots throughout and many very fine roots throughout; extremely acid, pH 4.3, Bromcresol green; abrupt wavy boundary. Lab sample # 93P04865

A--18 to 24 centimeters; very dark gray (N 3/0) broken face fine sandy loam; weak medium and coarse granular structure; friable, nonsticky, nonplastic; common very fine and fine roots throughout and few medium and coarse roots throughout; strongly acid, pH 5.1, Bromcresol green; abrupt wavy boundary. Lab sample # 93P04866

E--24 to 36 centimeters; dark gray (10YR 4/1) broken face fine sandy loam; 10 percent medium faint spherical very dark gray (10YR 3/1) and 25 percent medium and coarse faint spherical gray (10YR 5/1) mottles; massive; friable, nonsticky, nonplastic; few very fine to medium roots throughout; organic stains; strongly acid, pH 5.3, Chlorophenol red; abrupt wavy boundary. Lab sample # 93P04867

Bhs--36 to 57 centimeters; dark brown (7.5YR 3/2) broken face loamy sand; 10 percent fine distinct spherical strong brown (7.5YR 4/6) and 10 percent fine and medium distinct spherical very dark gray (5YR 3/1) mottles; massive; friable, nonsticky, nonplastic; common very fine and fine roots throughout and few medium roots throughout; strongly acid, pH 5.5, Chlorophenol red; abrupt wavy boundary. Lab sample # 93P04868

Bsm--57 to 65 centimeters; strong brown (7.5YR 5/6) broken face loamy sand; 10 percent fine and medium prominent irregular dark reddish brown (2.5YR 3/4) and 10 percent fine and medium prominent irregular dusky red (2.5YR 3/2) mottles; massive; very firm, hard, nonsticky, nonplastic; common very fine roots in cracks; strongly acid, pH 5.5, Chlorophenol red; clear wavy boundary. Lab sample # 93P04869. sample # 93P4875 is a subsample of this horizon.

Bs--65 to 98 centimeters; 85 percent (10YR/), broken face and 15 percent (2.5Y/), broken face; 25 percent medium and coarse prominent irregular red (2.5YR 4/6) and 25 percent medium and coarse distinct irregular strong brown (7.5YR 4/6) mottles; firm, slightly hard, nonsticky, nonplastic; few fine roots in cracks and common very fine roots in cracks; strongly acid, pH 5.5, Chlorophenol red; clear wavy boundary. Lab sample # 93P04871. 93P4870.

C--98 to 126 centimeters; yellowish brown (10YR 5/4) broken face loamy sand; 10 percent fine and medium distinct irregular yellowish brown (10YR 5/6) and 10 percent fine faint irregular brown (10YR 5/3) mottles; massive; friable, loose, nonsticky, nonplastic; moderately acid, pH 5.7, Chlorophenol red; clear wavy boundary. Lab sample # 93P04872

2Cd1--126 to 150 centimeters; light olive brown (2.5Y 5/3) broken face sandy loam; 1 percent medium prominent irregular yellowish brown (10YR 5/6) and 1 percent medium distinct irregular light brownish gray (10YR 6/2) mottles; massive; firm, slightly hard, nonsticky, nonplastic; brittle; common very fine and fine moderate-continuity vesicular pores; moderately acid, pH 5.6, Chlorophenol red; clear wavy boundary. Lab sample # 93P04873

2Cd2--150 to 183 centimeters; grayish brown (2.5Y 5/2) broken face sandy loam; 1 percent fine and medium prominent irregular yellowish brown (10YR 5/6) mottles; massive; firm, hard, nonsticky, nonplastic; brittle; common very fine and fine moderate-continuity vesicular pores; 1 percent fine spherical extremely weakly cemented dark reddish brown (5YR 3/2) iron-manganese masses throughout; moderately acid, pH 5.7, Chlorophenol red. Lab sample # 93P04874

MATTAPOISETT SERIES

The Mattapoisset series consists of soils shallow to ortstein, moderately deep or deep to dense lodgement till and very deep to bedrock. They are poorly drained soils that formed in sandy glaciofluvial deposits and/or eolian material underlain by lodgement till. Slope ranges from 0 through 8 percent. Saturated hydraulic conductivity is very high in the surface horizon and moderately low through low in the cemented subsoil (ortstein layer) and dense substratum. Mean annual temperature is about 48 degrees F. (9 degrees C) and mean annual precipitation is about 1090 millimeters.

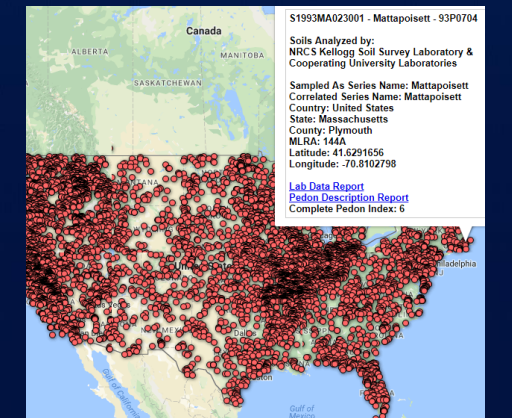

TAXONOMIC CLASS: Sandy, isotic, mesic, shallow, ortstein Typic Duraquods

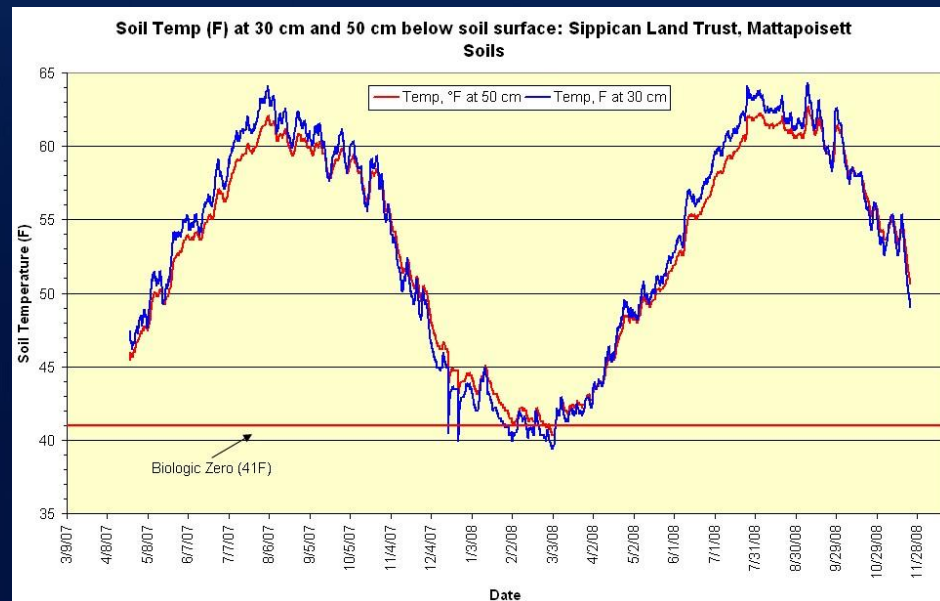

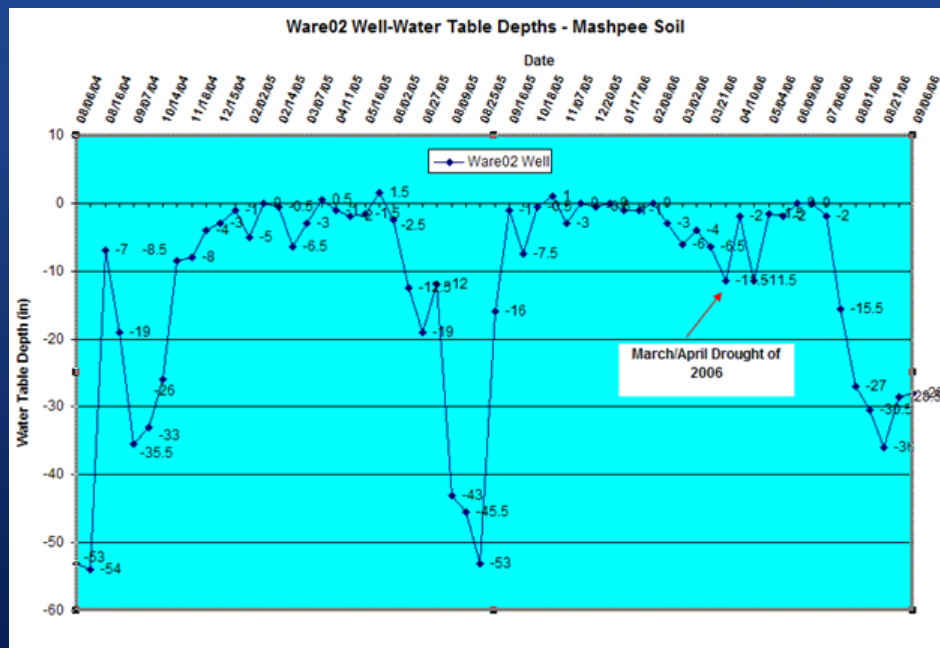

TYPICAL PEDON: Mattapoisset loamy sandy - on an east-facing, concave, 3 percent toe slope of a drumlin in a wooded area. (Colors are for moist soil.)

Oe- 0 to 3 centimeters; black (5YR 2.5/1) hemic material, many very fine, fine and medium roots; extremely acid; abrupt wavy boundary.

Oa- 3 to 8 centimeters; black (N 2.5/0) sapric material, common very fine and fine and few medium and coarse roots; extremely acid (pH 4.2); abrupt wavy boundary. (Combined thickness of the O horizons is 3 to 20 centimeters.)

A- 8 to 18 centimeters; black (N 2.5/0) loamy sand; massive, very friable, common very fine and fine roots and few medium and coarse roots; very strongly acid (pH 4.6); 5 percent gravel, 1 percent cobble, 2 percent stones; abrupt wavy boundary; (3 to 20 centimeters thick.)

"All we do in Soil Survey is Collect Data"

National Soil Information System NASIS - The Beast!

INTERPRETATIONS:

- Hydric Soil = Wetland
- High Watertable = Sever for most uses.
- Sandy soil – source of sand.
- Not Prime Farmland
- Hydrologic Group D
- Buried carbon = good riparian soils for nitrate removal.
- Site Index 55 for Red Maple
- High Pollinator Habitat – dominated by Clethera
- Well suited wetland wildlife habitat
- Suited for Blueberries/Cranberry
- Frequent Ponding (vernal pool)
- High carbon pools
- Low AWC
- Low Runoff
- 50 plus more interps!

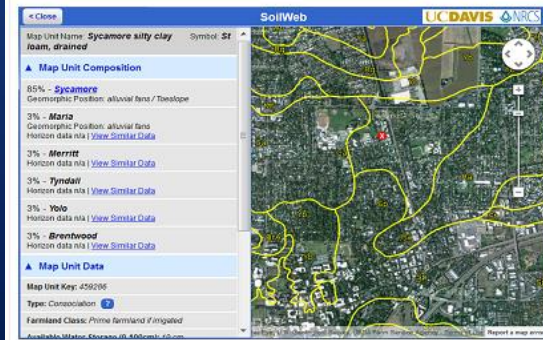

SoilWeb Apps

SoilWeb products can be used to access USDA-NCSS detailed soil survey data (SSURGO) for most of the United States. Please choose an interface to SoilWeb:

Google:
SoilWeb

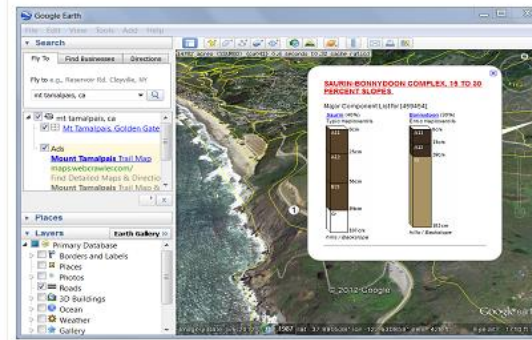

SoilWeb

Explore soil survey areas using an interactive Google map. View detailed information about map units and their components. This app runs in your web browser and is compatible with desktop computers, tablets, and smartphones.

SoilWeb Earth

Soil survey data are delivered dynamically in a KML file, allowing you to view mapped areas in a 3-D display. You must have [Google Earth](#) or some other means of viewing KML files installed on your desktop computer, tablet, or smartphone.

POLLASKY SERIES

The Pollasky series consists of moderately deep, well drained, moderately coarse textured Regosols formed in the residuum from softly to moderately consolidated arkosic sediments. They occur on undulating to steep dissected terraces under annual grasses and forbs. They have brown, slightly acid sandy loam A horizons and pale brown to yellowish brown, slightly acid to neutral, sandy loam C horizons abruptly overlying consolidated granitic sediments. Pollasky soils occur in the same

MEMORANDUM OF UNDERSTANDING FOR THE MAPPING PARTNERSHIP FOR COASTAL SOILS AND SEDIMENT (MAPCOAST)

PURPOSE:

The purpose of this agreement is to establish a partnership

OBJECTIVES:

MapCoast understands the need to develop a common hierarchical system of coastal soil and sediment classification that encompasses all disciplines including biology, wetlands, geology, and pedology. It is mutually agreed that MapCoast **will work cooperatively and partners will share resources, technology, equipment,** and knowledge to achieve the following objectives: |

- Develop soil and sediment mapping standards and protocols to produce accurate and useful maps.
- Build multiple interpretations of the soil and sediment data to service the coastal resource management community.
- Ensure that the soil, sediment, and bathymetric data collected will be made available to all users.
- Provide training and educate users about the soil and sediment data and maps.

Subaqueous

Who Wants a CZSS?

09/13/2017

United States Department of Agriculture

Helping People Understand Soils

Subaqueous

NCSS
National Cooperative
Soil Survey

Purpose:

To develop a 10-year plan for Coastal Zone Soil Survey (CZSS) through the National Cooperative Soil Survey (NCSS) with input from partners on standards, priority areas, and available resources.

Background:

A coastal zone soil survey is a seamless data set of soils information that encompasses inland soils, tidal marshes, and shallow subaqueous and submerged soils. Subaqueous and submerged soils are permanently covered by water. The 3-dimensional data set gives properties and characteristics of soils from the soil surface to a depth of approximately 2 meters (6 feet).

As a member of the National Cooperative Soil Survey, NRCS is the lead Federal agency for mapping and interpreting our nation's soil resources, including in our coastal zone areas. NRCS supports rigorous scientific content from field data gathering and research; diverse and uniquely effective partnerships; and modern techniques to produce spatial and tabular seamless soil surveys as well as timely distribution of the data to all users.

Planning Conference Topics are not reserved to the following, but will generally include:

1. **Work Planning – Identify project priority areas and resources for southeast regions**
 - Project plan development
 - Equipment/staffing needs

2. **Developing Partnerships: opportunities for cooperators; protocols for Memorandum of Agreement/Work, methods of sharing resources.**

3. **Technical Planning and Resources:**
 - **Topobathy:** existing resources and establishing future needs
 - **Laboratory Analysis for Coastal Zone Soil Survey**
 - Sampling guide to subaqueous soils.
 - Data needs for all coastal zone soil surveys including subaqueous soils, dunes, beaches, marshes and anthropogenic spoils.
 - **Guide to populating NASIS** - minimal population standards; Regional Office review and approval, Quality Control and Assurance.
 - **Updating OSDs** - Regional and National protocols.
 - **NCSS Proposals** – incorporating storm surge inundation; flooding phases; salinity/halinity classes

4. **Future Needs**
 - **Research needs/Interpretations** – Ecological Site Descriptions, properties, characteristics, TLD, coastal erosion; blue carbon; sulfides; surge inundation of salt water on crops/trees
 - **Interpretation needs**- establishing state, regional and national priorities.
 - **Training needs for staff and partners**
 - **Outreach/education needs for external customers**
